

# Colorizing Fired-On Images with Chalks and/ or Glazes

**Inspirational photo**

## Materials Needed

1. Fired-On Images Decal Paper
2. Any Canon Black-Only Laser Printer  
(or HP but check the FAQ page on website first)
3. Clay Carbon (carbonless tracing paper)
4. Bisque tile
5. White glaze
6. Assorted colored glazes and/ or underglaze chalks
7. optional: laser compatible overhead transparency sheet

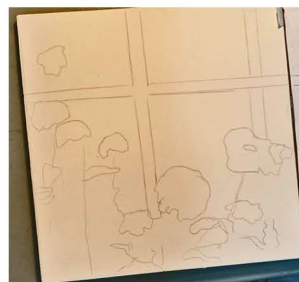

**1. Glaze bisque tile with 2-3 coats white glaze and let dry thoroughly.**

**2. Size image to fit on tile**

**3. Print image onto clay carbon,  
Decal Paper\* and optional transparency sheet**

**4. Tape clay carbon over white glaze  
and draw around areas where you want color.**

**\*If using cone 5/6 glaze wait to print decal onto  
decal paper until after glaze fire to account for  
shrinkage. Resize decal image and then print.**

**6. Use transparency sheet as a guide**

**5. Add colored glaze or draw with chalk in  
the lines wherever you want color to show through.**

**7. Fire to temp recommended  
for your white glaze.**

**8. Soak and slide decal over the colors  
and push out water and bubbles.**

**9. Fire to recommended decal firing temp  
depending on the \*glaze used.**

**\*Check the chart in the instructions that  
came with your decal paper.**

**Finished Tile!**
